

## Solution Brief

## SEPIO FOR LAW FIRMS

See What You've Been Missing.

Large law firms operate in complex and highly sensitive environments where data security and integrity are paramount. Sepio's comprehensive asset risk management solution, complemented by its Hardware Detection and Response (HWDR) service, is highly applicable, relevant, and crucial for such firms, as it provides unparalleled protection against advanced threats targeting hardware vulnerabilities and other asset-related risks.

By leveraging Sepio's innovative and patented technology, which utilizes physical layer information for accurate, reliable hardware asset detection, identification, and classification, these law firm giants can confidently secure their extensive networks, safeguard sensitive client information, and maintain their reputations as trusted advisors in the industry. Sepio's solution offers a robust and proactive approach to asset risk management, covering a wide spectrum of potential threats and aligning with the stringent compliance and risk management standards that large law firms must adhere to. With the added benefit of the HWDR service, Sepio ensures both enhanced security posture and effective risk mitigation, making it an essential component of their cybersecurity strategies.

## The Sepio Solution

Sepio's Asset Risk Management platform sees, assesses, and mitigates all known and shadow assets at any scale, as fast as they are added by anyone, anywhere. By leveraging the physical layer data source, we get to the true source of asset risk, providing you and the security tools you've invested in with a new dimension of asset visibility that simply wasn't possible before. In a single product, Sepio unleashes the power of the entire asset security ecosystem with agnostic, actionable visibility and infinite scalability that is critical to asset risk management.

## Holistic, objective truth

Sepio gets to the true source of asset risk by harnessing properties at the physical layer to generate an objective DNA profile for every known and shadow asset, regardless of its functionality and operability. Our unique approach and patented algorithms mean Sepio is untainted by misleading profile perceptions and behavioral assumptions that can deceive even the most robust cyber tools and result in erroneous risk management practices. With Sepio, your enterprise benefits from a centralized source of holistic and reliable asset visibility.

**Discover** and accurately detect all hardware assets

**Enforce** flexible, scalable policies and meet regulatory requirements

**Mitigate** risks from rogue assets

**Reduce** hardware clutter and optimize budget spending

**Integrate** seamlessly with your existing security solutions

**Certified** - SOC 2 Type II, ISO/IEC 27001 and ISO/IEC 27017

### **Actionable visibility**

Seeing is the critical prerequisite – but what you see is only as useful as what you can do with this knowledge. Sepio helps you instantly understand what needs attention by automatically generating an Asset Risk Factor (ARF) score for every asset. Based on asset DNA profiles and contextual business, location, and rules, the ARF score prioritizes risk to provide a new element to complete asset visibility.

The ARF score alerts you of high-medium-low risks to expedite time to resolution, identify regulation gaps, and prevent crises. Sepio accounts for any changes to an asset's ARF score by continuously monitoring the entire asset infrastructure to detect any behavioral changes or anomalies. Big data and machine learning, augmented by OSINT data sources, provide up-to-date threat intelligence on known-to-be-vulnerable assets to further optimize IT efficiency. The real-time actionable visibility helps your security team better understand your asset attack surface and manage risks proactively.

### **Control and mitigation**

The Sepio platform controls asset risk by automatically enforcing specific hardware usage through granular access controls, which are predefined by the system administrator. The solution compares an asset's DNA profile and ARF score with your preset rules and directly connects it to an enforced policy. Any changes to an asset are accounted for, and the appropriate policy applied. Assets that breach the preset rules or get recognized as known attack are immediately blocked, enabling instant and automated risk mitigation.

### **Infinite scalability**

You can't protect assets without scale. Sepio's unique trafficless approach enables painless asset risk management across the entire ecosystem by eliminating the need for a resource draining analysis. With no IT nightmares, no privacy infringements, and no compliance issues, the platform is easy to deploy and run, taking less than 24 hours to implement – it's a product, not a project.

### **Greater ROI**

The Sepio platform integrates seamlessly with leading cybersecurity solutions, such as NACs, EDRs, XDRs, Zero Trust solutions, and more, to bring them greater visibility and context – without us, these solutions can't complete their mission. By radically augmenting the power of existing tools, Sepio gets you more value from your IT and security investments.

## **About Sepio**

Founded in 2016 by cybersecurity industry experts, Sepio's Asset Risk Management (ARM) platform sees, assesses, and mitigates all known and shadow assets at any scale. The only trafficless solution, Sepio is infinitely scalable to protect the company's decentralized, uncontrolled ecosystem as fast and often as anyone, anywhere connects any assets. Sepio provides actionable visibility with the Asset Risk Factor (ARF) score based on a unique Asset DNA generated for each asset at its physical layer source, reflecting actual business, location, and rules. Sepio radically improves the efficacy of NACs, EDRs, XDRs & Zero Trust solutions that simply see only the assets they are there to protect.
